

Project Orion George Dyson

Project Orion George Dyson

Project Orion was a study of a spacecraft intended to be directly propelled by a series of explosions of atomic bombs behind the craft (nuclear pulse propulsion). Early versions of this vehicle were proposed to take off from the ground with significant associated nuclear fallout; later versions were presented for use only in space. Six tests were launched [citation needed].

Freeman Dyson - Wikipedia

Le Projet Orion fut la première étude de conception d'un véhicule spatial mû par propulsion nucléaire pulsée, idée proposée par Stanislaw Ulam en 1947. Le projet, amorcé dans les années 1950, était mené par une équipe d'ingénieurs et de physiciens de General Atomics, comprenant quelques célébrités telles que le physicien Theodore Taylor.

As the delta-V for a mission goes up, the amount of propellant required goes up exponentially (or looking at it another way: the amount of payload shrinks exponentially). Large amounts of propellant are expensive, but the higher the mass-ratio the higher the likelihood that the spacecraft will not be reusable.

Regular readers to this site may have read in the past our articles on Phobos, which is one of the small moons that circle around Mars. As we have speculated before, this 'moon' seems to be very odd, and has always been considered a rather mysterious object, as has its smaller twin, Deimos. Recent events seem to have strengthened our beliefs as news recently reached us that both Moons have ...

Ruimteonderzoek is het gebruik van astronomie en ruimtetechnologie om op een fysische manier de buitenste ruimte te onderzoeken met al dan niet bemande ruimtevluchten en ruimtetuigen.. Al in de oudheid observeerde men de bewegingen van de hemellichamen. De motivatie voor het ruimteonderzoek is echter niet steeds wetenschappelijk geweest: ook politieke motieven en wedijver speelden dikwijls mee.
