The Aqueduct™ tools enable users to measure, map, and mitigate water risks around the world with its open-source, and high-resolution platform. It uses multiple data layers to display water risks at any given location. Current water risks can be compared to those in the future, to visualize trends for optimistic, pessimistic, or business-as-usual climate and growth scenarios.

Introduction. Degraded lands are the center of much attention as global demands for food, feed and fuel continue to increase at unprecedented rates, while the agricultural land base needed for production is shrinking in many parts of the world (Bruinsma, 2003; Food and Agriculture Organization of the United Nations [FAO], 2005; Gelfand et al., 2013, Lambin et al., 2013, Lambin and Meyfroidt ...

Network mapping is the study of the physical connectivity of networks e.g. the Internet. Network mapping discovers the devices on the network and their connectivity. It is not to be confused with network discovery or network enumerating which discovers devices on the network and their characteristics such as (operating system, open ports, listening network services, etc.).

Network mapping - Wikipedia

For over 50 years, the World Future Society has been at the forefront of defining what it means to embrace a Futurist Mindset. Whether you're focused on social impact, creating a disruptive business, or exploring exponential technology, we believe there is a futurist in each of us.
